PRODUCT USES

Silvaloy 381 is a good general purpose low temperature brazing filler metal for use in cadmium-free brazing applications, such as air conditioning and refrigeration which involve the joining of steels, copper, copper alloys and nickel alloys.

BRAZING CHARACTERISTICS

Silvaloy 381 is a free-flowing, low temperature filler metal with excellent wetting characteristics of most ferrous and non-ferrous base metals, and is a good substitute for cadmium-bearing filler metals with similar silver content. The material is best suited for narrow gap situations (0.001" - 0.005" radial joint clearance). Handy[®] Flux, Handy[®] Flux Type B-1, Ultra Flux[®], or Black FluxTM should be used with this filler metal.

PROPERTIES OF BRAZED JOINTS

The properties of a brazed joint are dependent upon numerous factors including base metal properties, joint design, metallurgical interaction between the base metal and the filler metal.

AVAILABLE FORMS

Wire and engineered preforms in wire form.
